UI-VIEW SETUP FOR FILL-IN DIGI AND FULL DIGI

UI-View32 as a **"New Paradigm"** **fill-in digi**.   (Material gathered and graphics constructed by VE7BZC)

You must be running your TNC in KISS mode to enable the digipeater in UI-View32.

Go to Setup -> Digipeater Setup
Enable Digi is checked
UI Only is checked
Alias substitution is checked
WIDEn-n is not checked
TRACEn-n is not checked
Alias(es) has VE7BZC,WIDE1-1 <substitute your callsign for mine>
Sub Alias has VE7BZC <substitute your callsign for mine>
Dupe secs = 30
Digi routes has 1=1

Click on OK and you're done.

UI-View32 as a **"New Paradigm"** **full WIDEn-N digi**.

You must be running your TNC in KISS mode to enable the digipeater in UI-View32.

This involves opening up a text file, editing it and saving it. **NOTE:** Save a copy of the original file so if something happens you can easily revert back.

Open the UIVIEW32.INI file (located in C:\Program Files\Peak Systems\UI-View32\) scroll down to the section named [DIGI_OPTIONS] and set it to match this:

[DIGI_OPTIONS]
DIGI_ENABLED=TRUE
UI_ONLY=TRUE
ALIAS_SUBSTITUTION=TRUE
DUPE_SUPPESS_SECONDS=30
ALIAS=WIDE6-6,WIDE6-5,WIDE6-4,WIDE6-3,WIDE6-2,WIDE6-1,WIDE5-5,WIDE5-4,WIDE5-3,WIDE5-2,WIDE5-1,WIDE4-4,WIDE4-3,WIDE4-2,WIDE4-1,VE7BZC <substitute your callsign for mine here>
UIFLOOD=BC <enables BCn-N paths in British Columbia, substitute your province or state >
